

GENERAL CHARACTERISTICS

The thermostats TRM series, in compact IP65 execution, allow the opening or closing of an electrical circuit when the temperature reaches a prefixed calibration value. A simple and efficient tool for controlling the temperature. They are available with both N.O. and N.C. contact with calibrations from 40 °C to 130 °C.

- Good accuracy.
- Compact size.
- Small hysteresis.
- Easy to install.
- Minimum degree of protection IP65.
