

## GENERAL FEATURES

**Magnetostriuctive** continuous level transmitters base their operation on the physical principle called Wiedemann effect and it allows continuous and precise measurement of liquid levels. The electronic unit sends a pulse within a waveguide contained in the measuring rod; the magnetic float intercepts the pulse generating an echo that is detected by the same electronic unit.

The elapsing time between the emission of the pulse and its recognition is directly proportional to the position of the float, and then to the value of the level to be measured.

## • Brass - Spansil

- 1 analog output, current or voltage.
- 2 analog outputs, current and voltage.
- 2 factory programmable PNP digital outputs.
- RS485 serial output, Valco protocol.
- Programming via dedicated handheld computer VSP.130, on request
- Up to 2, 9 m length.
- Working pressure up to 20 bar
- Operating ambient temperature -30 / +70 °C, RH 90%.
- Standard working temperature up to 105 °C  
120 °C working temperature on request.
- Minimum degree of protection IP67.
