OMNIPLUS-HD2

Flow transmitter OMNIPLUS-HD2

- Robust industrial-grade flowmeter
- for use with viscous media (viscosity stabilized)
- High compressive strength (PN 200, optional PN500)
- No inlet and outlet sections required
- One analog output (10V or 20 mA switchable)
- Two switching outputs
- IO-Link interface

Product description

The flow transmitters of the OMNIPLUS-HD2 series work according to the principle of the spring-supported piston. A magnetically equipped piston is deflected by the flowing medium against the force of a spring. Deflection is a measure of flow rate. The position of the floating body is recorded outside the flow chamber with the help of magnetic field sensors.

The integrated electronics have an LCD display as well as an analog output and two switching outputs and can be easily configured by the user. In addition, it has an IO-Link interface that allows digital communication with the sensor.
