Product information

OMNIPLUS-RRI

1

Flow transmitter OMNIPLUS-RRI

- Long life due to high-quality ceramic axle and special plastic bearings
- No inlet and outlet sections required
- Modular design with different connection systems
- Connections can be plugged in and rotated

Characteristics

The flow transmitters of the OMNIPLUS-RRI series work with an impeller that is set in rotation by the flowing medium. The speed of rotation of the rotor depends linearly on the flow rate. The PVDF rotor is equipped with stainless steel clips (optionally titanium), which are detected by an inductive sensor located outside the flow chamber and thus enable the speed to be measured.

The rotor has a shatterproof ceramic axle that runs in durable special plastic bearings.

The housing is made of PPS or, alternatively, PVDF if there are special requirements for chemical resistance.

The PPS housing can be equipped with a transparent cover made of PSU, which allows a visual inspection of the paddle wheel.

The integrated electronics have an LCD display as well as an analog output and two switching outputs and can be easily configured by the user. In addition, it has an IO-Link interface that allows digital communication with the sensor.

In addition to the version presented here, other versions are available:

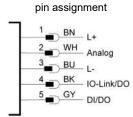

LABO-RRI without display, adjustable analog or

frequency output

RRI direct frequency output, not adjustable
