

GENERAL CHARACTERISTICS

For all applications where it is necessary to detect and electrically convert differential pressure measurements of non-aggressive gases.

The differential pressure is introduced via two hose in the measurement chamber, separated into two parts by a rubber diaphragm. The displacement of the diaphragm is transferred to the index of the measuring scale by means of a mechanism of amplification. All instrument components are housed in a plastic enclosure with degree of protection IP65.

- Wide measurement scale, $270^\circ = 235 \text{ mm}$.
- High precision 2%.
- Wall or panel mounting.
- Easy to connect.
- Degree of protection IP65.

DIFFERENTIAL PRESSURE RANGES

Tab.1

Type DA 85	Type DA 2000	Maximum static pressure	Code
Pa	Pa	Bar	
-	0 - 100	0,2	001
0 - 200	0 - 200	0,2	002
0 - 400	-	0,2	004
-	0 - 500	0,2	005
0 - 1000	0 - 1000	0,2	010
0 - 2000	0 - 2000	0,2	020
0 - 4000	-	0,2	040
-	0 - 5000	0,2	050
0 - 6000	-	0,2	060

Other measuring ranges on request

TECHNICAL DATA

Tab.2

Description		Code
Measuring element	Rubber diaphragm and calibrated spring	-
Measuring scale	Pascal mbar on request	-
Accuracy	$\pm 2\%$	-
Working temperature	$0 \div 50^\circ\text{C}$	$-20 \div +50^\circ\text{C}$ on request
Process connection	DA 85 $\varnothing 5 \text{ mm}$. hose	2520
	DA 2000 $\varnothing 8 \text{ mm}$. hose	2530
Body	Ultramid / Black ABS	-
Protection degree	IP65	IP65
Weight	480 gr	-

DA 85

DA 2000

INSTALLATION

Vertical mounting, otherwise the instrument will indicate differences of reading.

For rotations of 90° 0.5 mbar.
