#### **GENERAL CHARACTERISTICS**

Conductive probes SL series constitute, in combination with the electronic control units VNR21.22, a valid solution for controlling the level of liquid with minimum value of conductivity of  $1_{\mu}\text{S}.$ 

The probes are available in a wide variety of materials and process connections and their construction has been appropriately designed to ensure high operational reliability in difficult conditions, such as those found on industrial plants.

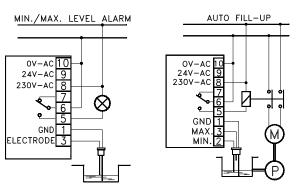

- Up to 4 electrodes.
- Coated electrodes.
- · Hermetic construction, epoxy resin sealed.
- Electrical output via DIN 43650 plug.
- Minimum degree of protection IP65.

# TECHNICAL DATA Tab.1

Description	Features			
N° electrodes each probe	1	2	3	4
Electrodes length L	500	10	00	1500
Electrical output	S1	DIN	DIN 43650 plug	
Electrodes coating	<b>VL</b> Polyolefir	_	<b>(</b> nar	<b>E</b> PTFE
Max. Bar	6			
Max. °C	100			
Degree of protection	IP65

#### **INSTALLATION AND MAINTENANCE**

#### Installation:

Conductive probes are supplied with all electrodes in standard lengths of 500, 1000 or 1500 mm.

As necessary and depending on the level under control, the electrodes must be shortened, according to the following precautions:

- 1) The ground electrode must always be the longest and be always immersed in the liquid to be controlled.
- 2) Once you have shortened the electrodes, remove the coating on the terminal part for about 1 cm. exposing the metal part.

#### Maintenance:

The only recommendation to be observed is: Periodically check the condition of the electrodes and their coating and possibly clean the same with non-aggressive liquids.
